Li Bo Unkempt Mike Zhai 2021-03-22 This is Li Bo. You may also know him as Li Po 李白 (701-62), the great poet of Tang China, master of swoop and soar, wanderer, man of wine, so enamored of the moon that he tried to embrace her reflection in the river, fell from his boat and drowned. Favorite of the Emperor-but only for a while, as such energies cannot be long contained at Court. Li Bo Unkempt presents seventy of his verses, a few letters, some rhapsodies and songs. They dance all through Tang high culture, inhabited by planets, hermit women, swashbucklers, grottos, calligraphers and buffoons, Li Bo's friends, lovers and alter egos. He's too shy, too quick to make introductions, but this volume allows us to hear the poetry's stories, their temperaments, to glimpse their secret economies of exchange. The book also offers background material, brief essays, a kind of Lonely Planet(TM) guidebook to this extraordinary realm. This way the strange will become familiar, and only then can we appreciate how truly strange it is. The authors and translators regard these poems as magical acts. What is offered, then, in this volume, are multiple ways to realize that magic. The essays are demonstrations, a spell-book, an extension of this non-ordinary knowing. Things too delicate to be said directly. So the book proceeds by analogy, by juxtaposition, latency, innuendo, jump cuts, dialetheia and flirt. All this a way to understand a deeper claim: that Li Bo is an immortal. And what might that be...? Kidder Smith was graced to study with Y.K. Kao at Princeton and Peter Boodberg at Berkeley. For some years he taught Chinese history at Bowdoin College, where he also directed the Asian Studies Program. He is senior author of Sung Dynasty Uses of the I Ching (Princeton University Press, 1990); Sun Tzu-the Art of War (with Denma, Shambhala, 2001); and Having Once Paused - Poetry of Zen Master Ikkyū (with Sarah Messer, University of Michigan Press, 2015). As a boy in Shanghai, Mike Zhai memorized Li Bo's poems in school. Later, at UC Berkeley, he studied modern Chinese poetry under Bei Dao, as well as German literature and music. He holds an MFA in English from Mills College. A lecturer in English at the University of Michigan, he founded One Pause Poetry Salon in Ann Arbor in 2016. His poems have been published in Spectrum magazine, and in 2017 he won the Green House Poetry Prize for emerging poets.

The Distance Between Lost and Found Kathryn Holmes 2015-02-17 Blending elements of Laurie Halse Anderson's Speak and Gary Paulsen's Hatchet, this gripping story from Kathryn Holmes was deemed "a page turner" by author Richard Peck and "an intense story of survival" by ALA Booklist in its starred review. Sophomore Hallie Calhoun has just endured the most excruciating six months of her life. Once the rumors about her and the preacher's son, Luke, made their way around school, her friends abandoned her, and as a result, Hallie has completely withdrawn. Now on a hiking trip in the Smoky Mountains with the same people who have relentlessly taunted her, Hallie is pushed to her limit. Then Hallie, outgoing newcomer Rachel, and Jonah—Hallie's former friend—get separated from the rest of the group. As days go by without rescue, their struggle for

survival turns deadly. Stranded in the wilderness, the three have no choice but to trust one another in order to stay alive...and for Hallie, that means opening up about what really happened that night with Luke. From the catty atmosphere of high school to the unpredictable terrain of the mountains, this novel is a poignant, raw journey about finding yourself after having been lost for so long.

Auditory and Visual Sensations Yoichi Ando 2009-10-08 Ando establishes a theory of subjective preference of the sound field in a concert hall, based on preference theory with a model of human auditory- brain system. The model uses the autocorrelation function and the interaural crosscorrelation function for signals arriving at two ear entrances and considers the specialization of human cerebral hemispheres. The theory may be applied to describe primary sensations such as pitch or missing fundamental, loudness, timbre, and duration. The theory may also be applied to visual sensations as well as subjective preference of visual environments. Remarkable findings in activities in both auditory-brain and visual-brain systems in relation to subjective preference as a primitive response are described.

Measurement Theory: Volume 7 Fred S. Roberts 1984-12-28 This book provides an introduction to measurement theory for non-specialists and puts measurement in the social and behavioural sciences on a firm mathematical foundation. Results are applied to such topics as measurement of utility, psychophysical scaling and decision-making about pollution, energy, transportation and health. The results and questions presented should be of interest to both students and practising mathematicians since the author sets forth an area of mathematics unfamiliar to most mathematicians, but which has many potentially significant applications.

The Design of Active Crossovers Douglas Self 2012-08-06 *The Design of Active Crossovers* is a unique guide to the design of high-quality circuitry for splitting audio frequencies into separate bands and directing them to different loudspeaker drive units specifically designed for handling their own range of frequencies. Traditionally this has been done by using passive crossover units built into the loudspeaker boxes; this is the simplest solution, but it is also a bundle of compromises. The high cost of passive crossover components, and the power losses in them, means that passive crossovers have to use relatively few parts. This limits how well the crossover can do its basic job. Active crossovers, sometimes called electronic crossovers, tackle the problem in a much more sophisticated manner. The division of the audio into bands is performed at low signal levels, before the power amplifiers, where it can be done with much greater precision. Very sophisticated filtering and response-shaping networks can be built at comparatively low cost. Time-delay networks that compensate for physical misalignments in speaker construction can be implemented easily; the equivalent in a passive crossover is impractical because of the large cost and the heavy signal losses. Active crossover technology is also directly applicable to other band-splitting signal-processing devices such as multi-band compressors. The use of active crossovers is increasing. They are used by almost every sound reinforcement system, by almost every recording studio monitoring set-up, and to a small but growing extent in domestic hifi. There is a growing acceptance in the hifi industry that multi-amplification using active crossovers is the obvious next step (and possibly the last big one) to getting the best possible sound. There is also a large usage of active crossovers in car audio, with the emphasis on routing the bass to enormous low-frequency loudspeakers. One of the very few drawbacks to using the active crossover approach is that it requires more power amplifiers; these have often been built into the loudspeaker, along with the crossover, and this deprives the customer of the chance to choose their own amplifier, leading to resistance to the whole active crossover philosophy. A comprehensive proposal for solving this problem is an important part of this book. The design of active crossovers is closely linked with that of the loudspeakers they drive. A chapter gives a concise but complete account of all the loudspeaker design issues that affect the associated active crossover. This book is packed full of valuable information, with virtually every page revealing nuggets of specialized knowledge never before published. Essential points of theory bearing on practical performance are lucidly and thoroughly explained, with the mathematics kept to an essential minimum. Douglas' background in design for manufacture ensures he keeps a wary eye on the cost of things. Features: Crossover basics and requirements The many different crossover types and how they work Design almost any kind of active filter with minimal mathematics Make crossover filters with very low noise and distortion Make high-performance time-delay filters that give a constant delay over a wide range of frequency Make a wide variety of audio equaliser stages: shelving, peaking and notch characteristics All about active crossover system design for optimal noise and dynamic range There is a large amount of new material that has never been published before. A few examples: using capacitance multipliers in biquad equalisers, opamp output biasing to reduce distortion, the design of NTMTM notch crossovers, the design of special filters for filler-driver crossovers, the use of mixed capacitors to reduce filter distortion, differentially elevated internal levels to reduce noise, and so on. Douglas wears his learning lightly, and this book features the engaging prose style familiar from his other books *The Audio Power Amplifier Design Handbook*, *Self on Audio*, and the recent *Small Signal Audio Design*.

The Business of Electronics A. Kumar Sethi 2013-11-19 Electronics is an ever-changing field with an entrepreneurial spirit and a rich history, populated by some of the world's most famous companies and personalities. *The Business of Electronics* details the field's complex ecosystem in all its trials and tribulations. It looks at companies such as Apple, IBM, Samsung, and Nokia, as well as now-extinct companies such as Honeywell Bull (France) and Sinclair Computers (UK) that contributed to technology and business. Sethi shows us how a handful of US companies led the charge in designing equipment that could make millions of small, reliable components; how Nokia started in the timber business; the history of inventors like J.C. Bose, a pioneer in radio communication (who inadvertently made Guglielmo Marconi famous); and why there are numerous companies and creators that never made it or that we have never heard of. This all-encompassing book not only explores the vibrant history of electronics, it uses case studies to examine the companies and people that made history and explain how we ended up where we are today.

The Zenith Trans-Oceanic John H. Bryant 1995 The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.
